TECHNICAL SKILLS

JavaScript · Typescript
C# · PHP · SQL
React · Next.js · Angular
Redux · NgRx · RxJS
Bootstrap · Material UI
Styled Components
React Router · Translations
Apollo · NX · WordPress
Node.js · Express.js
Knex.js · Winston
Dotnet · Entity Framework
Azure App Insight
MSSQL · Postgres · MongoDB
HTML · CSS · OOP · Azure
Jira · GitHub · GitLab

WORK EXPERIENCE

Senior Full Stack Developer / Team Lead
Zilis LLC – Argyle, TX (Remote)
03/2020 – Present

- Helped company initiate and implement Agile development workflow.
- Worked daily with team leveraging Agile development workflow and ceremonies (Daily Standup, Grooming, Retrospective).
- Worked in two-week sprints with team to complete assigned work items and followed coding best practices as well as peer code reviews via Azure DevOps.
- Developed with git versioning workflow via Azure DevOps.
- Maintenance and development in existing Angular 8 / Dotnet Core 3.1 monolithic application (Typescript / C#).
- Leverage NGRX for state management and RXJS for state and component subscriptions.
- Modified and created new features for Angular 8 application as well as provide oversight on complete redesign and code implementation.
- Implemented i18n translations using ngx-translate.
- Modified and create new backend controllers and endpoints to access third party services via REST and SOAP.
- Implemented logging from DNC backend to Azure Application Insights for UAT and Production environments.
- Created schemas and tables in SQL Azure DB for new applications and features (SQL server and SQL Data Studio).
- Created two Express backends in Node.js that connected to Azure hosted databases leveraging Knex.js for DB connections and migrations (multiple environments). Backends also connect to third-party services.
- Facilitate login and account creation services using Jason Web Tokens (JWT) for authorization and bcrypt for password hashing during creation / authentication.
- Writing DB queries using Knex.js to retrieve requested data. (C.R.U.D).
- Create builds for Express applications using Azure pipelines deployment scripts for development and production with Webpack. (Optimize builds).
- Test endpoints using Postman.
- Created Six React frontends utilizing React Bootstrap styling library, Styled Components, React-Router, and many other third-party packages. (JS / TS)
- Utilized functional reusable component architecture and leveraged hooks for state.

- Utilized Redux and Redux Thunk for application state management and async services.
- Utilized Redux DevTools for state debugging.
- Utilized axios for http services.
- Initialized component library via npm leveraging Storyboard for creating reusable components in isolation.
- Implemented i18n translations using react-intl library.
- Implemented GraphQL in some frontend applications using Apollo Client.
- Integrated Azure Active Directory for employee login for some frontend applications.
- Monitored and maintained Azure App Services as well app production support.
- Maintenance and development in WordPress. (PHP)
- Created Blog site in WordPress.
- Assist junior developers and contractors with code familiarity and blockers during development.
- Assist onboarding and architecture overview for new hires.
- Assist with developer interviews for technical feedback.

Software Engineer
NCR – Fort Worth, TX
01/2020 – 03/2020

- Worked daily with team leveraging Agile development workflow and ceremonies (Daily Standup, Grooming, Retrospective).
- Worked in two-week sprints with team to complete assigned work items and followed coding best practices as well as peer code reviews via Jira.
- Developed with git versioning workflow via Source Tree.
- Worked closely with QA to resolve code remediation.
- Support and development in Java / ASP.net monolithic application (Java / C#).
- Modified and created new features in Angular JS application for Backoffice dashboards and reporting UI (JavaScript).
- Modified and created new stored procedures in SQL for Backoffice reporting.
- Worked in multiple development environments.
- Worked with team to troubleshoot and research production errors and provide hotfix solutions.
- Provide deployment support for new features into production via Jenkins pipeline.
